

# STEAM Camp: Light Up Your Imagination!

Our STEAM camp offers a safe and nurturing environment where campers can express their creativity, solve problems, and gain new skills. Led by experienced instructors with a passion for education and the arts, this camp is the perfect summer destination for any young innovator eager to explore, create, and learn.

- **Illuminated Sculptures:** Campers will explore the electrifying art of light and sculpture by creating their own illuminated artworks. Using LED lights, circuits, and a variety of materials, each participant will learn how light can transform and define space, bringing their imaginative designs to life.
- **Architectural Portraits:** Our young architects will sketch and construct 3D models of buildings or their own fantasy structures. This activity not only draws on their artistic skills but also introduces basic architectural principles and the importance of structural integrity in design.
- **Ice Dyed T-shirts:** Adding a splash of color to the week, campers will twist, dye, and ice their way to making unique, vibrant t-shirts. This cool method introduces elements of chance and unpredictability in their designs, making each piece a one-of-a-kind creation.
- **And More!** Each day brings new projects and challenges, ensuring a rich mix of activities that stimulates all facets of the STEAM principles.
